AI Learning System in Kido App

The AI Learning System in the Kido App is designed to create a fun, interactive, and educational experience for children. It uses artificial intelligence to teach kids essential topics, encourage creativity, and promote moral values while keeping parents informed about their child's progress.

Features

1. **AI-Powered Educational System**
An intelligent learning assistant that teaches children different subjects defined by the app's creators, including English language, basic mathematics, and general knowledge. It provides lessons aligned with early educational systems in a simplified way.

2. **Story-Based Learning**
The AI tells children engaging stories that include a lesson or moral value. Since kids learn best through stories, this helps them understand concepts emotionally and logically.

3. **Gamified Progress System**
A reward and level system where children earn points and reach higher levels as they learn and interact more. After each lesson or story, the AI asks three multiple-choice questions based on what the child learned. This encourages competitiveness and motivates continuous learning.

4. **Parental Reports**
The AI sends parents detailed reports about their child's learning activity, including topics learned, stories listened to, and progress level. This ensures parental awareness and engagement in the child's educational journey.

Fees

Section	Fees
AI Learning System + Games	34,000EGP
Back-End	00000 EGP
Front-End	00000 EGP
